MINIMUM GRID AREA ALTITUDE

39 These figures are shown within each half degree of latitude and longitude. The value provides clearance of all terrain by 1000FT in areas where the highest points are 5000FT or lower and clears all elevations by 2000FT in areas where the highest points are 5001FT or higher. Spot elevations indicated in feet. Airspace structure always in feet.

ATTENTION: For latest aeronautical information consult AIP, AIP supplements and NOTAM. Prominent obstacles are not included in this chart (refer to AIP ENR 5.4). Aeronautical information for foreign territories are published with reservation and maybe incomplete. Bearings, courses and radials are magnetic. Hints for corrections will be appreciated. Date of aeronautical information 26 March 2020. Date of Topography 2018.
